Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: *"Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards"*, which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<http://webapp.etsi.org/IPR/home.asp>).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

1 Scope

To recap a little on PEMEA. There are five functional entities defined in the core specification:

- Application (App) :- Calling entity that runs on a device or in a web browser.
- Application Provider (AP) :- Server that converts information provided by the App to data formats that can be conveyed over the PEMEA network
- PSAP Service Provider (PSP) :- Provides interconnectivity between the PEMEA network and one or more PSAPs.
- Public Safety Answering Point (PSAP) :- System where the user's call is answered and data is presented to the call-taker.
- Aggregating Service Provider (ASP) :- Provider message routing at a national or global level interconnecting PSPs.

PEMEA defines interfaces between different PEMEA nodes as well as some protocols for these interfaces:

- Pa :- Between the App and the AP and is a proprietary interface
- Ps :- Between the AP and the PSP. This interface is specified in detail in TS 103 478
- Pp :- Between the PSP and the PSAP. This may be a proprietary interface, or may be based on PEMEA messaging depending on whether the PSAP is directly connected to the PEMEA network (identified PEMEA node) or if its data requests are proxied through a terminating-PSP.
- Pr :- Between the PSP and the ASP. This interface is specified in detail in TS 103 478.
- Pc :- Between the PSAP/PSP and the AP. This interface is used for a number of different communications. Some of these are specified in detail in TS 103 478, while others are specified to a lesser degree and are to be the subject of PEMEA extensions invoked using the PEMEA reach-back functions.

The main focus of the tests is on interoperability and conformance between nodes. Careful attention is paid to routing conditions and to security to ensure that the integrity of the network is maintained. Figure 1 shows the optimal test configuration. This allows for the testing of variety of implementations both for PEMEA entities and for applications as well as interoperability with SIP-based ESInets.

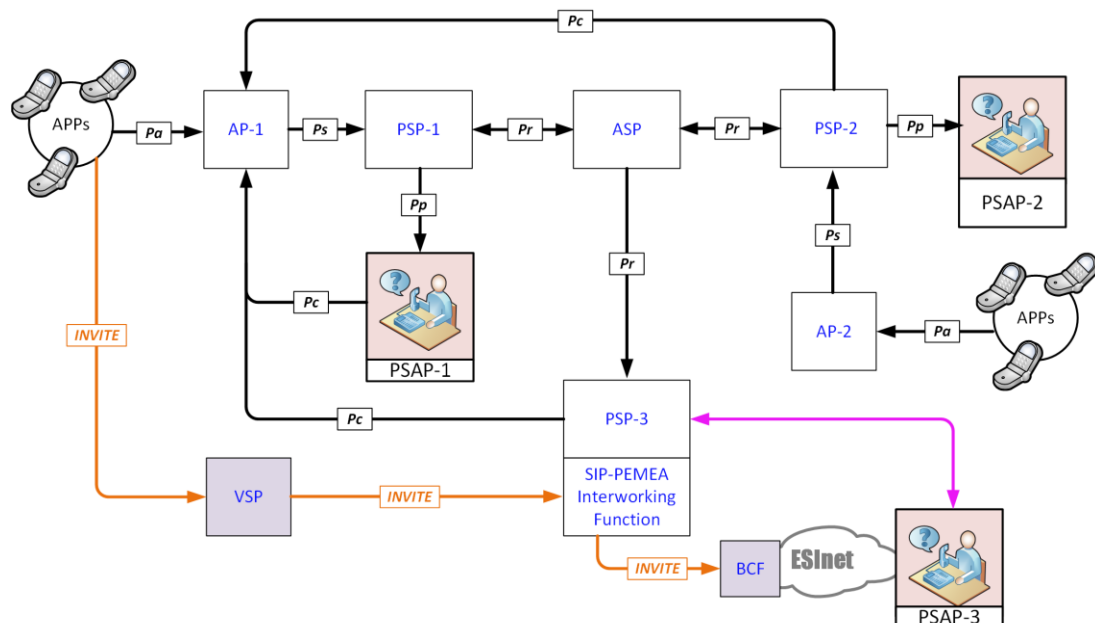

Figure 1 PEMEA test configuration

The present document defines a test plan with the purpose of supporting the first PEMEA Plugtest™ 2019 by covering the following:

- Secure connectivity between PEMEA entities on all nodes

- Conformance to PEMEA routing rules
- Conformance with PEMEA error handling procedures
- Conformance with PEMEA data message termination procedures
- Conformance with PEMEA mandatory data sets
- Conformance with PEMEA extensions:
 - Location updates
 - Audio Video
- PEMEA SIP interoperability

2 References

2.1 Summary

References are either specific (identified by date of publication and/or edition number or version number) or non-specific. For specific references, only the cited version applies. For non-specific references, the latest version of the referenced document (including any amendments) applies.

Referenced documents which are not found to be publicly available in the expected location might be found at <http://docbox.etsi.org/Reference>.

NOTE: While any hyperlinks included in this clause were valid at the time of publication ETSI cannot guarantee their long term validity.

2.2 Normative references

The following referenced documents assist the user with regard of the Plugtests preparation.

- [n1] EMTEL. Emergency Communications (EMTEL); Pan-European Mobile Emergency Application, ETSI TS 103 478 V1.1.1 (2018-03)

3 Definitions and Abbreviations

3.1 Abbreviations

For the purposes of the present document, the following abbreviations apply:

AP	Application Provider
App	Application
ASP	Aggregating Service provider
AV	Audio Video test cases
BCF	Border Control Function
DRE	Data retrieval test cases
EDS	Emergency Data Send
EDR	Emergency Data Received
EENA	European Emergency Number Association
ESInet	Emergency Services Internet
EUT	Entity Under Test

FDQN	Fully Qualified Domain Name
GDPR	General Data Protection Rights
HELD	HTTP-Enabled Location Delivery
HTTP	Hyper-Text Transfer Protocol
IFS	Interoperability Feature Statement
LOC	Location test cases
N/A	Not Applicable
PEMEA	Pan-European Mobile Emergency Application (framework)
PRA	PEMEA Registration Authority
PSAP	Public Safety Answering Point
PSP	PSAP Service Provider
RTE	Routing test cases
SIP	Session Initiation Protocol
SUT	System Under Test
TBD	To Be Determined
TBS	To Be Specified
TD	Test Description
tPSP	Terminating PSP
URI	Universal Resource Identifier

4 Conventions

4.1 Common Rules

PEMEA has strict security and component data access rules. While these have explicit test cases for each component under test, it is expected that these rules be complied with for all tests. Failure to comply with the security and data access rules will not, in some circumstances stop further functional testing (though it may in some cases and some implementations), no implementation can be considered PEMEA compliant or ready until all of the security requirements are met.

4.2 Test Description pro-forma

A Test Description (TD) is a detailed description of the process that needs to be followed to test one or more functional operations between two or more vendor implementations. A TD should include as a minimum the following elements:

Table 1: Test Description pro-forma

Interoperability Test Description			
Identifier	Unique test description ID: TD_AB_XXX_00. Follows a well-defined naming convention		
Test Objective	a concise summary of the test reflecting its purpose and allowing readers to easily distinguish this test from any other test in the document		
Configuration	Reference to the applicable configuration. This includes not only the functional entities, but any specific configuration that needs to be applied to these entities in order to execute the test case.		
References	List of references to the base specification clause(s), use case(s), requirement(s), etc. which are either used in the test or define the functionality being tested		
Applicability	List of features and capabilities in the IFS which are required to be supported by the EUTs or SUTs in order to execute this test		
Pre-test conditions	List of test specific pre-conditions that need to be met by the EUT including information about configuration, i.e. precise description of the initial state of the EUTs prior to start executing the test sequence.		
Test Sequence	Step	Type	Description
	1	<Type>	Step description
	2		
	3		
Notes	- Optional list of explanatory notes		

The Steps in the Test Sequence can be of different type, depending on their purpose:

- A **configure** corresponds to an action to modify the EUT or SUT configuration;
- A **stimulus** corresponds to an event that triggers a specific action on a EUT, like sending a message for instance;
- A **check** consists of observing that one EUT behaves as described in the standard.
- The **Verify** step consist of validating that the EUT produced the expected results and the system as a whole operates in accordance with the specification.

4.3 Interoperability Feature Statement (IFS)

The Interoperable Feature Statement (IFS) identifies the standardized functions and features of an EUT. These features can be mandatory, optional or conditional (depending on other features), and depend on the role played by the EUT. The IFS can also be used as a proforma by a vendor to identify the features that its EUT will support when interoperating with corresponding features from other vendors.

4.4 PEMEA requirements

The PEMEA specification, TS 103 478, talks about the notion of a PEMEA Registration Authority (PRA). It is the role of the PRA to maintain a list of all approved PEMEA entities and to make this available to all approved PEMEA entities. The European Emergency Number Association (EENA) provided an initial operations document [i1] describing some of the PRA functions and a draft update of this document, not yet released goes into considerably more detail.

In the absence of a PRA for the PlugTest equivalent data needs to be provided by vendors for each node that they plan on bringing to the PlugTest. An example is provided in Table 1

Table 1 Vendor node registration for PlugTest

Node type	Fully qualified host name*	PEMEA URI	PEMEA ID
AP	ap.myvendor.pemea.help	N/A	urn:eena:pemea:ap:<vendor>
PSP	psp.myvendor.pemea.help	https://psp.myvendor.pemea.help/	urn:eena:pemea:psp:<vendor>
ASP	asp.myvendor.pemea.help	https://asp.myvendor.pemea.help/	urn:eena:pemea:asp:<vendor>

PSAP	psap.myvendor.pemea.help	https://psap.myvendor.pemea.help/	urn:eena:pemea:psap:<vendor>
------	--------------------------	-----------------------------------	------------------------------

* PEMEA requires that each node have its own unique domain certificate so that each node and type can be uniquely identified. Self-signed certificates are not acceptable for the PlugTest as they increase time to load into each node and don't adequately reflect the deployment realities.

An entity may wish to bring more than one instance of a PEMEA node, if this is the case then each node must have a unique certificate, FQDN and PEMEA ID. The convention being used in this document for duplicate node types is to put a -1 after the node type in the PEMEA ID, for example if a vendor were to bring two APs then they would be labelled as such:

- urn:eena:pemea:ap-1:<vendor>
- urn:eena:pemea:ap-2:<vendor>

5 Configurations

5.1 Introduction

PEMEA has at its core the PEMEA Registration Authority (PRA) which provides the definitive list of all actively registered PEMEA entities. If an entity is not in this list then it is not a recognized PEMEA entity. Further, the list identifies the type of node that the registration corresponds to and a combination of this information is used to configure the various test scenarios.

The core network configuration is shown in Figure 1, however each test places different data in each of the nodes depending on what it trying to be verified. So, to aid with this, each configuration clearly indicates which entity(s) is/are under test in a particular configuration and what the expected data configuration for the nodes is. Where the same entities are under test but the required behavior is dependent on different configuration data, then a new configuration is specified as a sub-configuration to the primary one.

TS 103 478 allows for two combinations for EDS termination:

- At a terminating-PSP, in which case all PEMEA requests by the PSAP are invoked through the terminating-PSP since it is the PEMEA node.
- At a terminating-PSAP, in which case the PSAP is a registered PEMEA node and all PEMEA requests are made directly from the PSAP.

Both of these cases are catered for in the following configuration tables, where specific rows are conditional they are marked as follows:

- * Only required if the terminating node is a PEMEA registered PSAP entity
- ** Only required if the terminating node is a PEMEA registered PSP entity (tPSP)
- *** Only required if the requesting node is a PEMEA registered PSAP entity
- **** Only required if the requesting node is a PEMEA registered PSP entity (tPSP)

5.1.1 CFG_Basic_Local_Service

Figure 2 Basic local Service Configuration

In this network configuration the local PEMEA entities, AP-1, PSP-1 and PSAP-1, can all be verified for basic connectivity and security.

5.1.1.1 CFG_BLS_1A

The following table represents the PEMEA entities data to be loaded for each component show in Figure 2. In this configuration, AP-1 is able to send and EDS through PSP-1 and on to PSAP-1 and the PSAP is able to receive the data and notify AP-1 accordingly as well as fetch SubscriberInfo.

AP-1 PEMEA Entity Data			
Entity Name	Entity Type	PEMEA-ID	URI
AP-1	AP	urn:eena:pemea:ap-1:???	N/A
PSP-1	PSP	urn:eena:pemea:psp-1:???	TBS by PSP under test
PSAP-1 *	PSAP	urn:eena:pemea:psap-1:???	TBS if required
PSP-1 PEMEA Entity Data			
Entity Name	Entity Type	PEMEA-ID	URI
AP-1	AP	urn:eena:pemea:ap-1:???	N/A
PSP-1	PSP	urn:eena:pemea:psp-1:???	TBS by PSP under test
PSAP-1 *	PSAP	urn:eena:pemea:psap-1:???	TBS if required
PSAP-1 PEMEA Entity Data			
Entity Name	Entity Type	PEMEA-ID	URI
AP-1 *	AP	urn:eena:pemea:ap-1:???	N/A
PSP-1 *	PSP	urn:eena:pemea:psp-1:???	TBS by PSP under test
PSAP-1 *	PSAP	urn:eena:pemea:psap-1:???	TBS if required

5.1.1.2 CFG_BLS_1B

The following table represent the PEMEA entities data to be loaded for each component show in Figure 2. In this configuration AP-1 does not have a PEMEA entity for a PSP, so it will fail to send an EDS.

AP-1 PEMEA Entity Data			
------------------------	--	--	--

Entity Name	Entity Type	PEMEA-ID	URI
AP-1	AP	urn:eena:pemea:ap-1:???	N/A
PSAP-1 [*]	PSAP	urn:eena:pemea:psap-1:???	TBS if required
PSP-1 PEMEA Entity Data			
Entity Name	Entity Type	PEMEA-ID	URI
AP-1	AP	urn:eena:pemea:ap-1:???	N/A
PSP-1	PSP	urn:eena:pemea:psp-1:???	TBS by PSP under test
PSAP-1 [*]	PSAP	urn:eena:pemea:psap-1:???	TBS if required
PSAP-1 PEMEA Entity Data			
Entity Name	Entity Type	PEMEA-ID	URI
AP-1 [*]	AP	urn:eena:pemea:ap-1:???	N/A
PSP-1 [*]	PSP	urn:eena:pemea:psp-1:???	TBS by PSP under test
PSAP-1 [*]	PSAP	urn:eena:pemea:psap-1:???	TBS if required

5.1.1.3 CFG_BLS_1C

The following table represent the PEMEA entities data to be loaded for each component show in Figure 2. In this configuration we introduce a new PSP, PSP-2 that is not shown in Figure 2 and this is configured into AP-1, while PSP-1 is left out of AP-1's PEMEA Entity Data set. The AP should be unable to send the EDS.

AP-1 PEMEA Entity Data			
Entity Name	Entity Type	PEMEA-ID	URI
AP-1	AP	urn:eena:pemea:ap-1:???	N/A
PSP-2	PSP	urn:eena:pemea:psp-2:???	Any PSP that is not PSP-1
PSAP-1 [*]	PSAP	urn:eena:pemea:psap-1:???	TBS if required
PSP-1 PEMEA Entity Data			
Entity Name	Entity Type	PEMEA-ID	URI
AP-1	AP	urn:eena:pemea:ap-1:???	N/A
PSP-1	PSP	urn:eena:pemea:psp-1:???	TBS by PSP under test
PSAP-1 [*]	PSAP	urn:eena:pemea:psap-1:???	TBS if required
PSAP-1 PEMEA Entity Data			
Entity Name	Entity Type	PEMEA-ID	URI
AP-1	AP	urn:eena:pemea:ap-1:???	N/A
PSP-1	PSP	urn:eena:pemea:psp-1:???	TBS by PSP under test
PSAP-1 [*]	PSAP	urn:eena:pemea:psap-1:???	TBS if required

5.1.1.4 CFG_BLS_1D^{*}

The following table represent the PEMEA entities data to be loaded for each component show in Figure 2. This configuration is only applicable if PSAP-1 is a PEMEA registered entity. It requires PSP-1 to configure PSAP-1 into its PEMEA entity data set and to configure PSAP-1 as a neighbour. In cases where PSP-1 only configures PSAPs into its PEMEA entity data set if they are neighbours then this configuration is not needed.

AP-1 PEMEA Entity Data			
Entity Name	Entity Type	PEMEA-ID	URI
AP-1	AP	urn:eena:pemea:ap-1:???	N/A
PSP-1	PSP	urn:eena:pemea:psp-1:???	TBS by PSP under test
PSAP-1	PSAP	urn:eena:pemea:psap-1:???	TBS by PSAP under test if required
PSP-1 PEMEA Entity Data			
Entity Name	Entity Type	PEMEA-ID	URI
AP-1	AP	urn:eena:pemea:ap-1:???	N/A
PSP-1	PSP	urn:eena:pemea:psp-1:???	TBS by PSP under test
PSAP-1 PEMEA Entity Data			
Entity Name	Entity Type	PEMEA-ID	URI
AP-1	AP	urn:eena:pemea:ap-1:???	N/A
PSP-1	PSP	urn:eena:pemea:psp-1:???	TBS by PSP under test
PSAP-1	PSAP	urn:eena:pemea:psap-1:???	TBS by PSAP under test if required

5.1.2 CFG_PSP_Connectivity

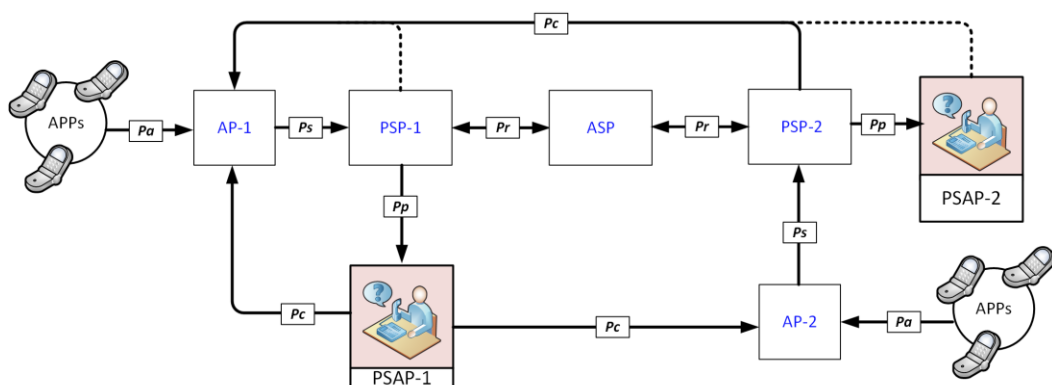

Figure 3 PSP Connectivity Configuration

This network configuration validates what can communicate with a PSP from a connectivity and security perspective. Note that Pc may originate either from a PSAP (if it is a registered PEMEA entity) or from a PSP if it is a tPSP.

5.1.2.1 CFG_PSPC_1A

In this configuration all data is directed to traverse through PSP-1 on its way to PSAP-1. PSP-1 is configured such that it only knows about itself so all EDS messages are rejected.

AP-1 PEMEA Entity Data

Entity Name	Configured Entity Type	PEMEA-ID	URI
AP-1	AP	urn:eena:pemea:ap-1:???	N/A
PSP-1	PSP	urn:eena:pemea:psp-1:???	TBS by PSP under test
PSP-1 PEMEA Entity Data			
Entity Name	Configured Entity Type	PEMEA-ID	URI
PSP-1	PSP	urn:eena:pemea:psp-1:???	TBS by PSP under test
PSAP-1 PEMEA Entity Data (Not Applicable)			
ASP PEMEA Entity Data			
Entity Name	Configured Entity Type	PEMEA-ID	URI
AP-2	AP	urn:eena:pemea:ap-2:???	N/A
PSP-2	PSP	urn:eena:pemea:psp-2:???	TBS
PSP-1	PSP	urn:eena:pemea:psp-1:???	TBS by PSP under test
ASP	ASP	urn:eena:pemea:asp:???	TBS
PSP-2 PEMEA Entity Data			
Entity Name	Configured Entity Type	PEMEA-ID	URI
AP-2	AP	urn:eena:pemea:ap-2:???	N/A
PSP-2	PSP	urn:eena:pemea:psp-2:???	TBS
PSP-1	PSP	urn:eena:pemea:psp-1:???	TBS by PSP under test
ASP	ASP	urn:eena:pemea:asp:???	TBS
AP-2 PEMEA Entity Data

PSP-2	PSP	urn:eena:pemea:psp-2:???	TBS
ASP	ASP	urn:eena:pemea:asp:???	TBS

5.1.2.2 CFG_PSPC_1B

In this configuration all data is directed to traverse through PSP-1 on its way to PSAP-1. PSP-1 is configured such that it knows all nodes specified in Figure 3. Data initiating from AP-1 will arrive at PSAP-1 via PSP-1. Data initiating from AP-2 will traverse PSP-2 then the ASP, then PSP-1 before arriving at PSAP-1.

AP-1 PEMEA Entity Data			
Entity Name	Configured Entity Type	PEMEA-ID	URI

PSAP-1 [*]	PSAP	urn:eena:pemea:psap-1:???	TBS if required

5.1.2.3 CFG_PSPC_1C

In this configuration all data is directed to traverse through PSP-1 on its way to PSAP-1. PSP-1 is configured such that it knows all nodes specified in Figure 3. Data initiating from AP-1 will arrive at PSAP-1 via PSP-1. Data initiating from AP-2 will traverse PSP-2 then PSP-1 before arriving at PSAP-1. The ASP is left unconfigured.

AP-1 PEMEA Entity Data			
Entity Name	Configured Entity Type	PEMEA-ID	URI

PSAP-1*	PSAP	urn:eena:pemea:psap-1:???	TBS if required
---------	------	---------------------------	-----------------

5.1.2.4 CFG_PSPC_1D

In this configuration all data is directed to traverse through PSP-1 on its way to PSAP-1. PSP-1 is configured such that it only knows about itself so it rejects all EDS messages. PSP-2 directs all non-PSAP-2 based data to PSP-1 with the ASP being left unconfigured.

AP-1 PEMEA Entity Data			
Entity Name	Configured Entity Type	PEMEA-ID	URI
AP-1	AP	urn:eena:pemea:ap-1:???	N/A
PSP-1	PSP	urn:eena:pemea:psp-1:???	TBS by PSP under test
PSP-1 PEMEA Entity Data			
Entity Name	Configured Entity Type	PEMEA-ID	URI
PSP-1	PSP	urn:eena:pemea:psp-1:???	TBS by PSP under test
PSAP-1 PEMEA Entity Data (Not Applicable)			
ASP PEMEA Entity Data (Not Applicable)			
PSP-2 PEMEA Entity Data			
Entity Name	Configured Entity Type	PEMEA-ID	URI
AP-2	AP	urn:eena:pemea:ap-2:???	N/A
PSP-2	PSP	urn:eena:pemea:psp-2:???	TBS
PSP-1	PSP	urn:eena:pemea:psp-1:???	TBS by PSP under test
AP-2 PEMEA Entity Data			
Entity Name	Configured Entity Type	PEMEA-ID	URI
AP-2	AP	urn:eena:pemea:ap-2:???	N/A
PSP-2	PSP	urn:eena:pemea:psp-2:???	TBS

5.1.3 CFG_ASP_Connectivity

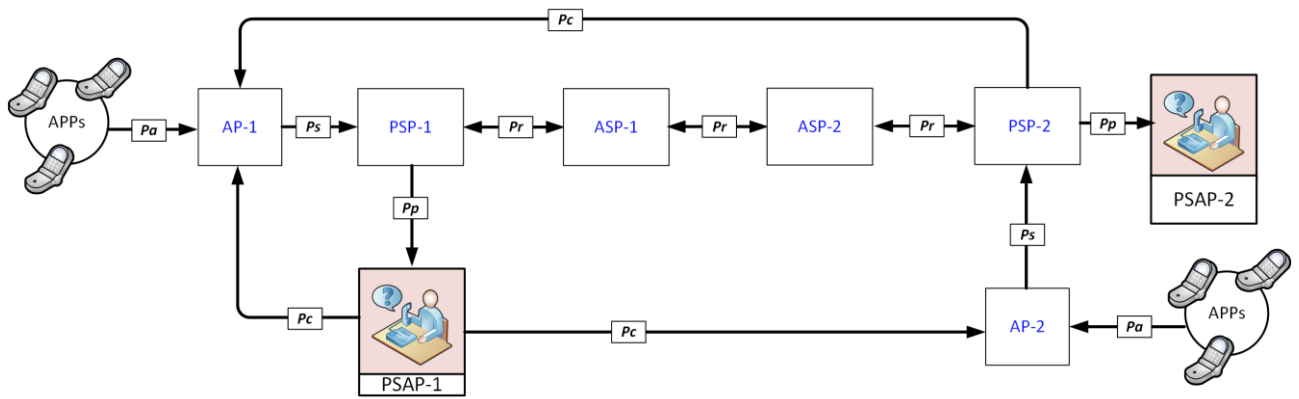

Figure 4 ASP Roaming Configuration

This network configuration validates what can communicate with an ASP from a connectivity and security perspective. Note that Pc may originate either from a PSAP (if it is a registered PEMEA entity) or from a PSP if it is a tPSP.

5.1.3.1 CFG_ASP_1A

In this configuration all data is directed to traverse through ASP-1, either as an ingress or egress node. ASP-1 is configured such that it only knows about itself so all EDS messages are rejected.

AP-1 PEMEA Entity Data			
Entity Name	Configured Entity Type	PEMEA-ID	URI
AP-1	AP	urn:eena:pemea:ap-1:???	N/A
PSP-1	PSP	urn:eena:pemea:psp-1:???	TBS by PSP under test
PSP-1 PEMEA Entity Data			
Entity Name	Configured Entity Type	PEMEA-ID	URI
AP-1	AP	urn:eena:pemea:ap-1:???	N/A
PSP-1	PSP	urn:eena:pemea:psp-1:???	TBS
ASP-1	ASP	urn:eena:pemea:asp-1:???	TBS by ASP under test
PSAP-1 PEMEA Entity Data (Not Applicable)			
ASP-1 PEMEA Entity Data			
Entity Name	Configured Entity Type	PEMEA-ID	URI
ASP-1	ASP	urn:eena:pemea:asp-1:???	TBS by ASP under test
ASP-2 PEMEA Entity Data			
Entity Name	Configured Entity Type	PEMEA-ID	URI
PSP-2	PSP	urn:eena:pemea:psp-2:???	TBS
ASP-1	ASP	urn:eena:pemea:asp-1:???	TBS by ASP under test
ASP-2	ASP	urn:eena:pemea:asp-2:???	TBS
PSP-2 PEMEA Entity Data			

Entity Name	Configured Entity Type	PEMEA-ID	URI
AP-2	AP	urn:eena:pemea:ap-2:???	N/A
PSP-2	PSP	urn:eena:pemea:psp-2:???	TBS
ASP-2	ASP	urn:eena:pemea:asp-2:???	TBS
AP-2 PEMEA Entity Data			
Entity Name	Configured Entity Type	PEMEA-ID	URI
AP-2	AP	urn:eena:pemea:ap-2:???	N/A
PSP-2	PSP	urn:eena:pemea:psp-2:???	TBS
ASP-2 ^{Note}	ASP	urn:eena:pemea:asp-2:???	TBS

Note: ASP-2 entity data is required by AP-2 otherwise errors indicated failed delivery cannot be delivered as AP-2 will reject them.

5.1.3.2 CFG_ASP_1B

In this configuration all data is directed to traverse through ASP-1, either as an ingress or egress node. ASP-1 is configured such that it thinks PSP-1 is an AP and ASP-2 is a PSAP. In consequence, all EDS messages are rejected.

AP-1 PEMEA Entity Data			
Entity Name	Configured Entity Type	PEMEA-ID	URI
AP-1	AP	urn:eena:pemea:ap-1:???	N/A
PSP-1	PSP	urn:eena:pemea:psp-1:???	TBS by PSP under test

AP-2 PEMEA Entity Data (Not required)			

5.1.4 Capability configurations

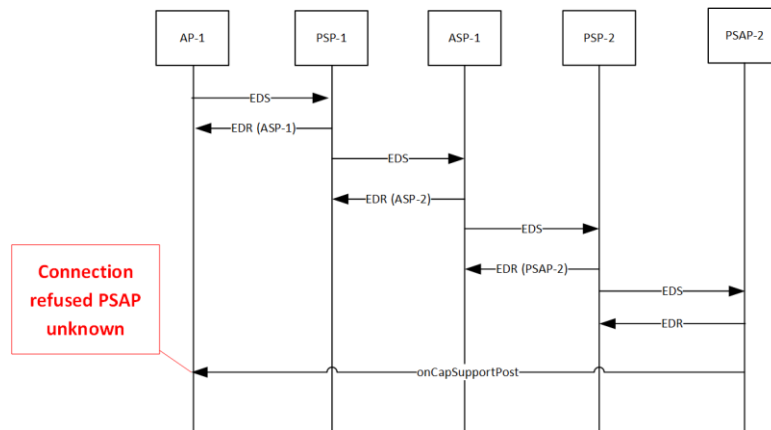

This section defines the configurations for sending onCapSupportPost messages. It provides configurations for ensuring that the messages are sent to valid node types and defined entities.

5.1.4.1 CFG_CAP_1A

In this configuration data is directed from AP-1 through ASP-1, PSP-2 to PSAP-2. However, AP-1 doesn't know about PSAP-2 or PSP-2, so any onCapSupportPost will fail at AP-1 as the connection will be refused.

AP-1 PEMEA Entity Data			
Entity Name	Configured Entity Type	PEMEA-ID	URI
AP-1	AP	urn:eena:pemea:ap-1:???	N/A
PSP-1	PSP	urn:eena:pemea:psp-1:???	TBS
PSP-1 PEMEA Entity Data			
Entity Name	Configured Entity Type	PEMEA-ID	URI
AP-1	AP	urn:eena:pemea:ap-1:???	N/A
PSP-1	PSP	urn:eena:pemea:psp-1:???	TBS
ASP-1	ASP	urn:eena:pemea:asp-1:???	TBS by ASP under test
ASP-1 PEMEA Entity Data			
Entity Name	Configured Entity Type	PEMEA-ID	URI
PSP-1	PSP	urn:eena:pemea:psp-1:???	TBS
PSP-2	PSP	urn:eena:pemea:psp-2:???	TBS
PSP-2 PEMEA Entity Data			
Entity Name	Entity Type	PEMEA-ID	URI
AP-1	AP	urn:eena:pemea:ap-1:???	N/A
PSP-2	PSP	urn:eena:pemea:psp-2:???	TBS
ASP-1	ASP	urn:eena:pemea:asp-2:???	TBS
PSAP-2 *	PSAP	urn:eena:pemea:psap-2:???	TBS if required
PSAP-2 PEMEA Entity Data			
Entity Name	Configured Entity Type	PEMEA-ID	URI
AP-1	AP	urn:eena:pemea:ap-1:???	N/A
PSP-2	PSP	urn:eena:pemea:psp-2:???	TBS
PSAP-2 *	PSAP	urn:eena:pemea:psap-2:???	TBS if required

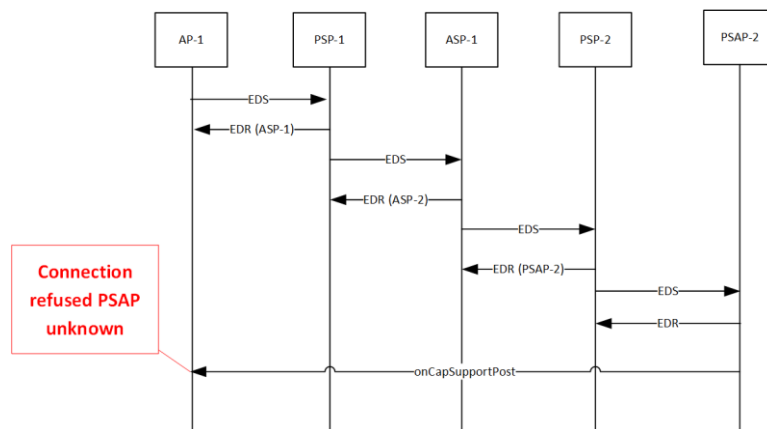

5.1.4.2 CFG_CAP_1B

In this configuration data is directed from AP-1 through ASP-1, PSP-2 to PSAP-2. However, AP-1 has PSAP-2 and PSP-2 configured as ASPs, so any onCapSupportPost will fail at AP-1 as the connection will be refused.

AP-1 PEMEA Entity Data			
Entity Name	Configured Entity Type	PEMEA-ID	URI
AP-1	AP	urn:eena:pemea:ap-1:???	N/A
PSP-1	PSP	urn:eena:pemea:psp-1:???	TBS
PSP-2**	ASP	urn:eena:pemea:psp-2:???	TBS if required
PSAP-2*	ASP	urn:eena:pemea:psap-2:???	TBS if required
PSP-1 PEMEA Entity Data			
Entity Name	Configured Entity Type	PEMEA-ID	URI
AP-1	AP	urn:eena:pemea:ap-1:???	N/A
PSP-1	PSP	urn:eena:pemea:psp-1:???	TBS
ASP-1	ASP	urn:eena:pemea:asp-1:???	TBS by ASP under test
ASP-1 PEMEA Entity Data			
Entity Name	Configured Entity Type	PEMEA-ID	URI
PSP-1	PSP	urn:eena:pemea:psp-1:???	TBS
PSP-2	PSP	urn:eena:pemea:psp-2:???	TBS
PSP-2 PEMEA Entity Data			

Entity Name	Entity Type	PEMEA-ID	URI
AP-1	AP	urn:eena:pemea:ap-1:???	N/A
PSP-2	PSP	urn:eena:pemea:psp-2:???	TBS
ASP-1	ASP	urn:eena:pemea:asp-2:???	TBS
PSAP-2 [*]	PSAP	urn:eena:pemea:psap-2:???	TBS if required
PSAP-2 PEMEA Entity Data			
Entity Name	Configured Entity Type	PEMEA-ID	URI
AP-1 [*]	AP	urn:eena:pemea:ap-1:???	N/A
PSP-2 [*]	PSP	urn:eena:pemea:psp-2:???	TBS
PSAP-2 [*]	PSAP	urn:eena:pemea:psap-2:???	TBS if required

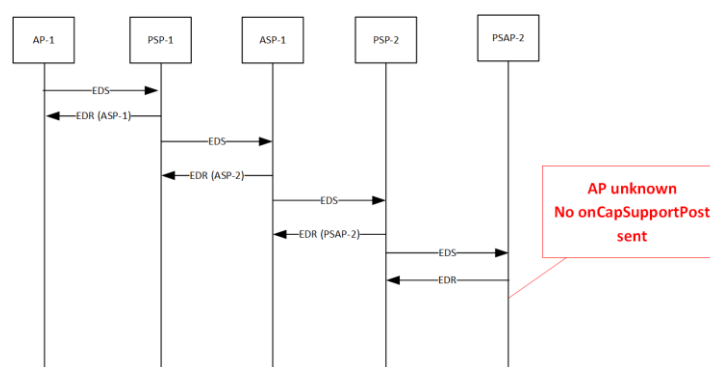

5.1.4.3 CFG_CAP_1C

In this configuration data is directed from AP-1 through ASP-1, PSP-2 to PSAP-2. However, PSAP-2 and PSP-2 do not contain data for AP-1 so there is no domain match against the URI in the onCapSupportPost URI, so no onCapSupportPost is sent.

AP-1 PEMEA Entity Data			
Entity Name	Configured Entity Type	PEMEA-ID	URI
AP-1	AP	urn:eena:pemea:ap-1:???	N/A
PSP-1	PSP	urn:eena:pemea:psp-1:???	TBS
PSP-2 ^{**}	PSP	urn:eena:pemea:psp-2:???	TBS if required

PSAP-2 [*]	PSAP	urn:eena:pemea:psap-2:???	TBS if required
PSP-1 PEMEA Entity Data			
Entity Name	Configured Entity Type	PEMEA-ID	URI
AP-1	AP	urn:eena:pemea:ap-1:???	N/A
PSP-1	PSP	urn:eena:pemea:psp-1:???	TBS
ASP-1	ASP	urn:eena:pemea:asp-1:???	TBS by ASP under test
ASP-1 PEMEA Entity Data			
Entity Name	Configured Entity Type	PEMEA-ID	URI
PSP-1	PSP	urn:eena:pemea:psp-1:???	TBS
PSP-2	PSP	urn:eena:pemea:psp-2:???	TBS
PSP-2 PEMEA Entity Data			
Entity Name	Entity Type	PEMEA-ID	URI
PSP-2	PSP	urn:eena:pemea:psp-2:???	TBS
ASP-1	ASP	urn:eena:pemea:asp-2:???	TBS
PSAP-2 [*]	PSAP	urn:eena:pemea:psap-2:???	TBS if required
PSAP-2 PEMEA Entity Data			
Entity Name	Configured Entity Type	PEMEA-ID	URI
PSP-2 [*]	PSP	urn:eena:pemea:psp-2:???	TBS
PSAP-2 [*]	PSAP	urn:eena:pemea:psap-2:???	TBS if required

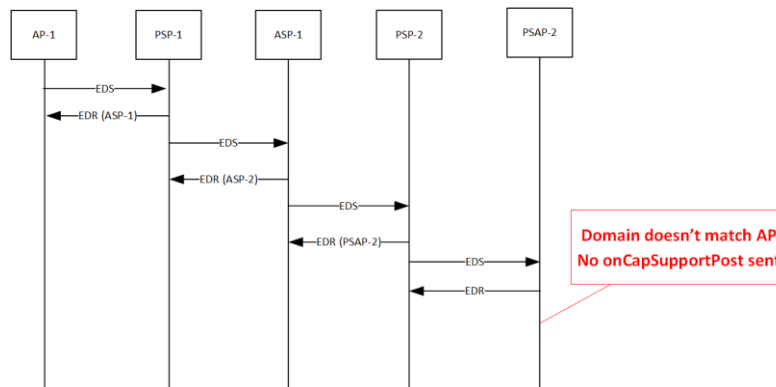

5.1.4.4 CFG_CAP_1D

In this configuration data is directed from AP-1 through ASP-1, PSP-2 to PSAP-2. However, PSAP-2 and PSP-2 have data for AP-1 defines as an ASP so there is a type mismatch against the URI in the onCapSupportPost URI, so no onCapSupportPost is sent.

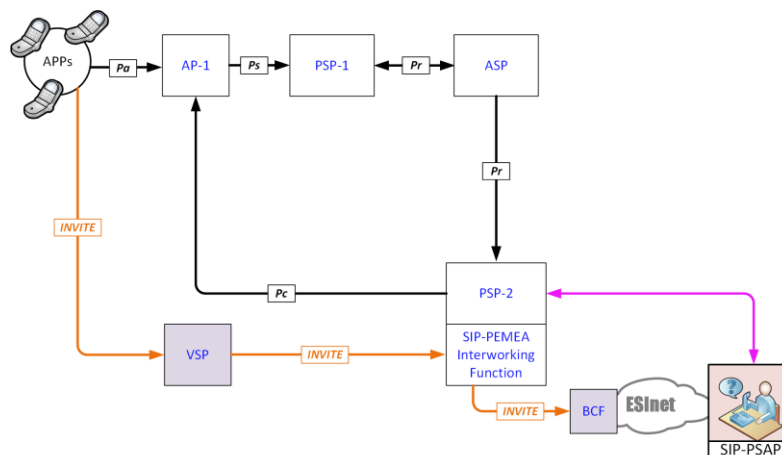

AP-1 PEMEA Entity Data			
Entity Name	Configured Entity Type	PEMEA-ID	URI
AP-1	AP	urn:eena:pemea:ap-1:???	N/A
PSP-1	PSP	urn:eena:pemea:psp-1:???	TBS
PSP-2 ^{**}	PSP	urn:eena:pemea:psp-2:???	TBS if required
PSAP-2 [*]	PSAP	urn:eena:pemea:psap-2:???	TBS if required
PSP-1 PEMEA Entity Data

PSP-2 [*]	PSP	urn:eena:pemea:psp-2:???	TBS
PSAP-2 [*]	PSAP	urn:eena:pemea:psap-2:???	TBS if required

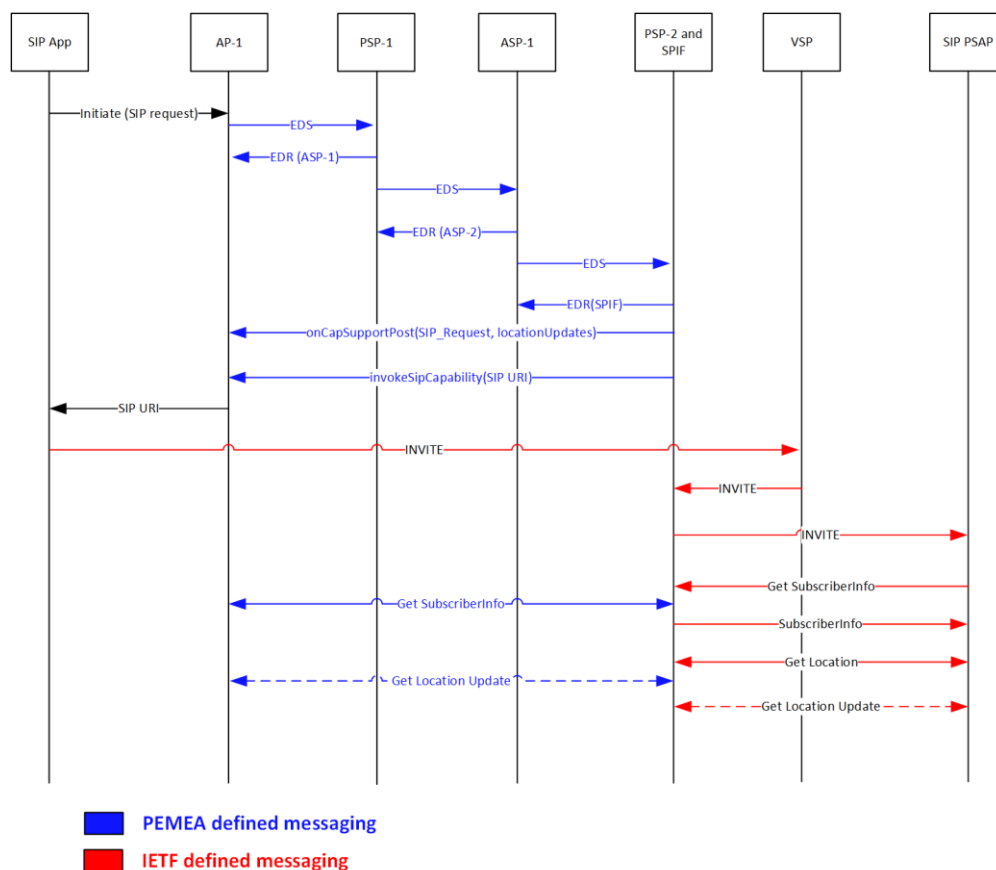

5.1.5 CFG_SIP_1

This section defines the configurations associated with PEMEA SIP interworking. The configurations defined here concentrate on success case and have the pre-requisite that all the security, connectivity and routing tests have already been successfully conducted. The diagram and subsequent signaling shows the PSP/PSAP and SIP-PEMEA Interworking Function (SPIF) as a combined element. They may be implemented differently to this, but any interface between these nodes is considered proprietary. Any connectivity back into the PEMEA network by the PSAP for more information must go via the PSP/PSAP-SPIF entity to ensure integrity of the PEMEA network.

AP-1 PEMEA Entity Data			
Entity Name	Configured Entity Type	PEMEA-ID	URI
AP-1	AP	urn:eena:pemea:ap-1:???	N/A
PSP-1	PSP	urn:eena:pemea:psp-1:???	TBS
PSP-2**	PSP	urn:eena:pemea:psp-2:???	TBS if required

PSAP-2 [*]	PSAP	urn:eena:pemea:psap-2:???	TBS if required

5.1.6 CFG_AV_1

This section defines the configuration for testing the Audio_Video capabilities extension in PEMEA. This capability is largely left unspecified in TS 103 478 but was extensively defined, implemented and tested by a number of partners as part of European Commission (EC) project NEXES which was focusing on a range of different next generation emergency services solutions beyond just those specified in TS 103 479 and associated architectures.

The configuration defined here concentrates on the success case and has the pre-requisite that all the security, connectivity and routing tests have already been successfully conducted.

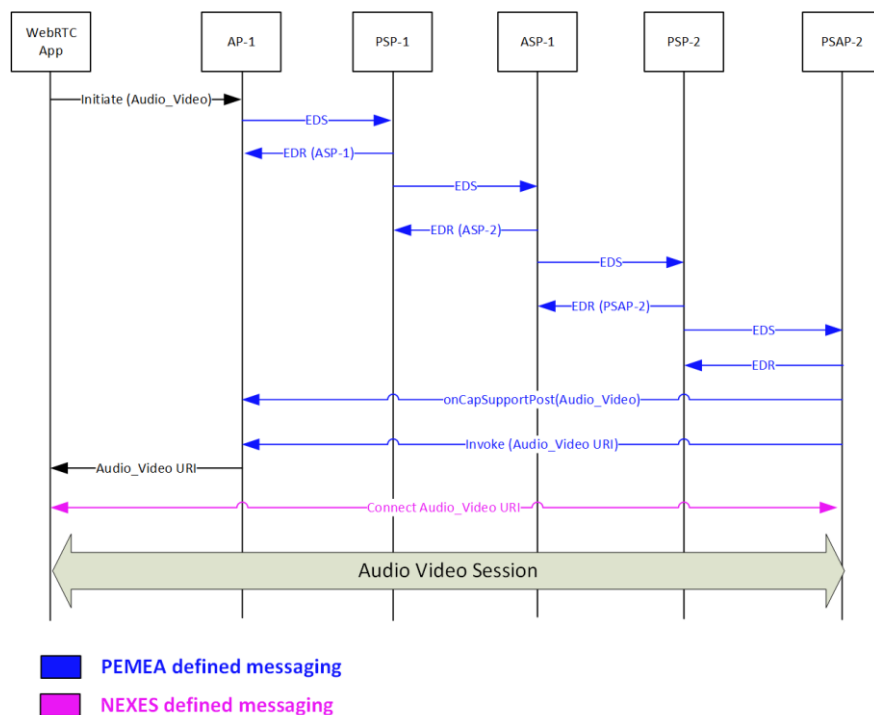

The configuration provided is general enough that if a vendor's specific implementation doesn't follow the NEXES model exactly that it should still map on to the general message exchanges. Being able to interoperate with implementations other a vendor's own is the aim of this event, so use of proprietary extensions should be avoided.

The NEXES implementation provides the application with a URI to a web page containing javascript that implements a WebRTC session with the PSAP call taker using a bridge-service hosted in the PSAP.

AP-1 PEMEA Entity Data			
Entity Name	Configured Entity Type	PEMEA-ID	URI
AP-1	AP	urn:eena:pemea:ap-1:???	N/A
PSP-1	PSP	urn:eena:pemea:psp-1:???	TBS
PSP-2**	PSP	urn:eena:pemea:psp-2:???	TBS if required
PSAP-2*	PSAP	urn:eena:pemea:psap-2:???	TBS if required in place of PSP-2
PSP-1 PEMEA Entity Data			
Entity Name	Configured Entity Type	PEMEA-ID	URI
AP-1	AP	urn:eena:pemea:ap-1:???	N/A
PSP-1	PSP	urn:eena:pemea:psp-1:???	TBS
ASP-1	ASP	urn:eena:pemea:asp-1:???	TBS by ASP under test
ASP-1 PEMEA Entity Data			
Entity Name	Configured Entity Type	PEMEA-ID	URI
PSP-1	PSP	urn:eena:pemea:psp-1:???	TBS
PSP-2	PSP	urn:eena:pemea:psp-2:???	TBS
PSP-2 PEMEA Entity Data			
Entity Name	Entity Type	PEMEA-ID	URI
AP-1***	ASP	urn:eena:pemea:ap-1:???	N/A

PSP-2	PSP	urn:eena:pemea:psp-2:???	TBS
ASP-1	ASP	urn:eena:pemea:asp-2:???	TBS
PSAP-2*	PSAP	urn:eena:pemea:psap-2:???	TBS if required as a PEMEAs terminating node.
PSAP-2 PEMEAs Entity Data			
Entity Name	Configured Entity Type	PEMEA-ID	URI
AP-1*	ASP	urn:eena:pemea:ap-1:???	N/A
PSP-2*	PSP	urn:eena:pemea:psp-2:???	TBS
PSAP-2*	PSAP	urn:eena:pemea:psap-2:???	TBS if required

6 Test Summary

6.1 Basic security and connectivity tests

6.1.1 Applicable configurations

The configurations applicable to the Basic Tests are:

- CFG_BLS_1A
- CFG_BLS_1B
- CFG_BLS_1C
- CFG_PSPC_1A
- CFG_PSPC_1B
- CFG_PSPC_1C
- CFG_BLS_1D*

- CFG_ASP_1A
- CFG_ASP_1B

6.1.2 List of objectives

Table 2: BSC Test Objectives

Test ID	Objective	Req Mapping to TS 103 478	Configs
Basic Security and connectivity			
TD_BSC_1	Verify that an AP will not send an EDS to the local PSP when PSP not in the PEMEA entity list.	4.2.2, AP-3, AP-5, AP-6	CFG_BLS_1B
TD_BSC_2	Verify that an AP will not send an EDS to any node that is not a local PSP.	4.2.2, 4.2.3, AP-3, AP-5	CFG_BLS_1C
TD_BSC_3	Verify that an AP will send an EDS to PSP that is in the PEMEA entity list and is configured as local.	4.2.2, AP-3, AP-5, AP-6	CFG_BLS_1A
TD_BSC_4	Verify that a PSP will not accept an EDS from an AP when the node is not in the PEMEA entity list.	PSP-5, PSP-11, PSP-12	CFG_PSPC_1A
TD_BSC_5	Verify that a PSP will not accept an EDS from a PSP when the node is not in the PEMEA entity list.	PSP-5, PSP-11, PSP-12	CFG_PSPC_1D
TD_BSC_6	Verify that a PSP will not accept an EDS from an ASP when the node is not in the PEMEA entity list.	PSP-5, PSP-11, PSP-12	CFG_PSPC_1A
TD_BSC_7	Verify that a PSP will not accept an EDS directly from an AP that is not configured as neighbour.	4.2.3	CFG_PSPC_1B
TD_BSC_8	Verify that a PSP will accept an EDS directly from an AP where the AP is in the PEMEA entity list, and AP is configured as a neighbour. Covered by TD_BSC_3	4.2.3, PSP-4, 14.2.1	CFG_BLS_1A
TD_BSC_9	Verify that a PSP will not send an EDS to a PSAP that is not its neighbour	4.2.3	CFG_BLS_1D*
TD_BSC_10	Verify that a PSP will accept an EDS from an ASP that authenticates	PSP-12, 14.2.3	CFG_PSPC_1B
TD_BSC_11	Verify that a PSP will accept an EDS from a PSP that authenticates	PSP-12	CFG_PSPC_1C
TD_BSC_12	Verify that a PSP will not send an EDS to any node that is not in the PEMEA entity list.	PSP-9	CFG_PSPC_1C CFG_PSPC_1B CFG_BLS_1D*

	Covered by completion of TD_BSC_9, TD_BSC_10, TD_BSC11		
TD_BSC_13	Verify that a PSP will send an EDS to a PSP that authenticates Covered by TD_BSC_11	PSP-9, PSP-10, 14.2.2	CFG_PSPC_1C
TD_BSC_14	Verify that a PSP will send an EDS to an ASP that authenticates Covered by TD_BSC_10	PSP-9, PSP-10, 14.2.2	CFG_PSPC_1B
TD_BSC_15	Verify that a PSP will send an EDS to a neighbouring PSAP	4.2.3	
TD_BSC_16	Verify that a PSAP will not accept an EDS from an entity not in the PEMEA entity list		
TD_BSC_17	Verify that a PSAP will only accept an EDS from a PSP or other PSAP.		
TD_BSC_18	Verify that a PSAP will only accept an EDS from a PSP or PSAP that is defined as a neighbor.	4.2.3	
TD_BSC_19	Verify that an ASP not accept an EDS from a node that is not in the PEMEA entity list.	ASP-4, ASP-5, ASP-6	CFG_ASP_1A
TD_BSC_20	Verify that an ASP will not accept an EDS from an AP	4.2.4, ASP-3, PSP-9, PSP-10	CFG_ASP_1B
TD_BSC_21	Verify that an ASP will not accept an EDS from a PSAP	4.2.4, ASP-3	CFG_ASP_1B
TD_BSC_22	Verify that an ASP will accept an EDS from a PSP that authenticates Covered by TD_BSC_21	4.2.4, ASP-3, ASP-6, 14.3.2	CFG_PSPC_1B
TD_BSC_23	Verify that an ASP will accept an EDS from an ASP that authenticates	4.2.4, ASP-4, ASP-5, ASP-6, 14.3.2	CFG_ASP_1CCFG_PSPC_1C
TD_BSC_24	Verify that an ASP will send an EDS from an ASP that authenticates Covered by TD_BSC_23	ASP-6, 14.3.3	CFG_PSPC_1C
TD_BSC_25	Verify that an ASP will send an EDS from a PSP that authenticates Covered by TD_BSC_23	ASP-6, 14.3.3	CFG_PSPC_1B

6.2 Routing (RTE) tests

6.2.1 Applicable configurations

The configurations applicable to the Routing Tests are:

- CFG_BLS_1A
- CFG_PSPC_1B
- CFG_PSPC_1C
- CFG_ASP_1C
- CFG_ASP_1D
- CFG_ASP_1E
- CFG_ASP_1F
- CFG_ASP_1G
- CFG_CAP_1A
- CFG_CAP_1B

6.2.2 List of objectives

Table 2: RTE Test Objectives

Test ID	Objective	Req Mapping to TS 103 478	Configs
Routing and terminations			
TD_RTE_1	Verify that an Application in its home area can send data to the local PSAP. Covered by TD_BSC_3	7.2.2	CFG_BLS_1A
TD_RTE_2	Verify that data associated with a roaming Application gets to the PSAP nearest the Application. Covered by TD_BSC_10	7.3.4	CFG_PSPC_1B CFG_PSPC_1C CFG_ASP_1C
TD_RTE_3	Verify that an ASP correctly detects circular routing and does not forward the EDS	13.3 (Table 12)	CFG_ASP_1D
TD_RTE_4	Verify that a PSP correctly detects circular routing and does not forward the EDS	13.3 (Table 12)	CFG_ASP_1E
TD_RTE_5	Verify that an ASP returns an error to the AP when it cannot route an EDS	7.3.3, 11.1.3, 13.3	CFG_ASP_1D
TD_RTE_6	Verify that a PSP returns an error to the AP when it cannot route an EDS	7.3.3, 11.1.3, 13.3	CFG_ASP_1F
TD_RTE_7	Verify that an AP will not accept an error message from a node that is not in the PEMEA entity list	9.2, 11.1.3	CFG_ASP_1G
TD_RTE_8	Verify that an AP will accept an error message from any node that is in the PEMEA entity list.	9.2, 11.1.3	CFG_ASP_1D CFG_ASP_1F
TD_RTE_9	Verify that a terminating PSP/PSAP sends an onCapSupportPost to the AP if one is provided.	10.3.12, 11.1.1, 11.1.4	CFG_BLS_1A

TD_RTE_10	Verify that the AP will not accept an onCapSupportPost connection from a node not in the PEMEA entity list	9.2, 14.1.2	CFG_CAP_1A
TD_RTE_11	Verify that the AP will accept an onCapSupportPost from a PSP or PSAP Covered by TD_BSC_9	9.2, 10.3.12, 14.1.2	CFG_ASP_1C
TD_RTE_12	Verify that the AP will not accept an onCapSupportPost from a node registered as an ASP.	9.2, 11.1.4	CFG_CAP_1B
TD_RTE_13	Verify that the AP will not accept an onCapSupportPost for an EDS when it has already accepted one.	<i>Should be added to section 11.1.4, as it is a condition case that is missing</i>	CFG_BLS_1A

6.3 Data Retrieval (DRE) tests

6.3.1 Applicable configurations

The configurations applicable to the Data Retrieval Tests are:

- CFG_BLS_1A
- CFG_ASP_1C
- CFG_CAP_1C
- CFG_CAP_1D

6.3.2 List of objectives

Table 2: DRE Test Objectives

Test ID	Objective	Req Mapping to TS 103 478	Configs
Data retrieval and invocation			
TD_DRE_1	Verify that the terminating PSP/PSAP will not retrieve data from a node not in the PEMEA entity list.	9.2, 14.1.2	CFG_CAP_1C
TD_DRE_2	Verify that the terminating PSP/PSAP will not retrieve data from a node that is not defined as an AP in the PEMEA entity list. This includes SubscriberInfo, UserInfo or any capability invocation.	<i>A new procedure set is required for this under Clause 14.2 PSP Procedures</i>	CFG_CAP_1D
TD_DRE_3	Verify that the terminating PSP/PSAP can retrieve SubscriberInfo via a URI provided in the EDS.	13.2, 13.7	CFG_ASP_1C
TD_DRE_4	Verify that an AP will only accept a request for SubscriberInfo from a node in the PEMEA entity list that is identified as a PSP or PSAP.	9.2, 11.1.4	CFG_ASP_1C

TD_DRE_5	Verify that the terminating PSP/PSAP can retrieve UserInfo via a URI provided in the EDS.	13.2, 13.7	CFG_ASP_1C
TD_DRE_6	Verify that an AP will only accept a request for UserInfo from a node in the PEMEA entity list that is identified as a PSP or PSAP.	9.2, 13.7	CFG_ASP_1C
TD_DRE_7	Verify that the AP will only provide SubscriberInfo or UserInfo to the same entity that sent the onCapSupportPost.	<i>This is not described and explicit requirement in the TS, however it should be for security reasons and should explicitly added to clause 11.1.4</i>	CFG_BLS_1A
TD_DRE_8	Verify that the EDS contains the identity information for the AP (ProviderInfo)	12.5.5, 13.2, 13.3, 13.4	CFG_BLS_1A

6.4 Location Retrieval (LOC) tests

6.4.1 Applicable configurations

The configurations applicable to the Location Retrieval Tests are:

- CFG_BLS_1A

6.4.2 List of objectives

Table 2: LOC Test Objectives

Test ID	Objective	Req Mapping to TS 103 478	Configs
Location Updates			
TD_LOC_1	Verify that a terminating PSP/PSAP includes the location update capability in the onCapSupportPost if the capability is proffered in the EDS and it supports location updates.	10.3.11, 10.3.12, 11.1.1, 11.1.4	CFG_BLS_1A
TD_LOC_2	Verify that the terminating PSP/PSAP will not request a location update if the provided URI does not map to a valid AP node in the PEMEA entity list.	<i>A new procedure set is required for this under Clause 14.2 PSP Procedures</i>	
TD_LOC_3	Verify that the terminating PSP/PSAP can receive a location update from a valid AP.	<i>Refer to RFC 6753</i>	CFG_BLS_1A
TD_LOC_4	Verify that the AP will not accept a request for location updates if the requesting node not defined as a PSP or PSAP in the PEMEA entity list.	9.2, 14.1.2	CFG_BLS_1A

TD_LOC_5	Verify that the AP will only provide location updates to the same entity that sent the onCapSupportPost.	<i>This is not described and explicit requirement in the TS, however it should be for security reasons and should explicitly added to clause 11.1.4</i>	CFG_BLS_1A
TD_LOC_6	Verify that the AP will return an HTTP 404 Not found when its application has closed the data connection and the terminating PSP or PSAP makes a request for a location update.	14.1.3	CFG_BLS_1A

6.5 SIP Signalling (SIP) tests

6.5.1 Applicable configurations

The configurations applicable to the SIP Signalling Tests are:

- CFG_SIP_1

6.5.2 List of objectives

Table 2: SIP Test Objectives

Test ID	Objective	Req Mapping to TS 103 478	Configs
SIP Request			
TD_SIP_1	Verify that if the terminating PSP or PSAP that supports the SIP_Request capability and the capability is proffered in the EDS by the AP that it is included in the onCapSupportPost response.	10.3.11, 10.3.12, 11.1.1, 11.1.4	CFG_SIP_1
TD_SIP_2	Verify that the terminating PSP/PSAP will only invoke the SIP_Request capability if the URI corresponds to an AP in the PEMEA entity list.	<i>A new procedure set is required for this under Clause 14.2 PSP Procedures</i>	CFG_SIP_1
TD_SIP_3	Verify that the AP will only accept the invocation of the SIP_Request capability from a node that corresponds to a PSP or PSAP in the PEMEA entity list.	9.2, 14.1.2	CFG_SIP_1
TD_SIP_4	Verify that the AP will only accept the invocation of the SIP_Request capability from the node that sent the onCapSupportPost for the EDS.	<i>This is not described and explicit requirement in the TS, however it should be for security reasons and should explicitly added to clause 11.1.4</i>	CFG_SIP_1
TD_SIP_5	Verify that the destination PSAP can retrieve location information		CFG_SIP_1

	associated with the SIP call via the PEMEA node		
TD_SIP_6	Verify that the destination PSAP can retrieve location updates associated with the SIP call via the PEMEA node		CFG_SIP_1

6.6 Audio Video (AV) tests

6.6.1 Applicable configurations

The configurations applicable to the AV Tests are:

- CFG_AV_1CFG_SIP_1

6.6.2 List of objectives

Table 2: AV Test Objectives

Test ID	Objective	Req Mapping to TS 103 478	Configs
Audio_Video :- NEXES			
TD_AV_1	Verify that if the terminating PSP or PSAP that supports the Audio_Video capability and the capability is proffered in the EDS by the AP that it is included in the onCapSupportPost response.	10.3.11, 10.3.12, 11.1.1, 11.1.4	CFG_AV_1
TD_AV_2	Verify that the terminating PSP/PSAP will invoke the Audio_Video capability in the AP as soon as it has sent the onCapSupportPost message.	<i>Under specified, requires updates to the TS, and a formal extensions document</i>	CFG_AV_1
TD_AV_3	Verify that the terminating PSP/PSAP will only invoke the Audio_Video capability if the URI corresponds to an AP in the PEMEA entity list.	<i>A new procedure set is required for this under Clause 14.2 PSP Procedures</i>	CFG_AV_1
TD_AV_4	Verify that the AP will only accept the invocation of the Audio_Video capability from a node that corresponds to a PSP or PSAP in the PEMEA entity list.	9.2, 14.1.2	CFG_AV_1
TD_AV_5	Verify that the AP will only accept the invocation of the Audio_Video capability form the node that send the onCapSupportPost for the EDS.	<i>This is not described and explicit requirement in the TS, however it should be for security reasons and should explicitly added to clause 11.1.4</i>	CFG_AV_1

7 Test Descriptions

7.1 BSC Test Descriptions

Interoperability Test Description			
Identifier	TD_BSC_1		
Test Objective	Verify that an AP will not send an EDS to the local PSP when PSP not in the PEMEA entity list.		
Configuration	CFG_BLS_1B		
References	TS 103 478		
Applicability	4.2.2, AP-3, AP-5, AP-6		
Pre-test conditions	<ul style="list-style-type: none"> The PEMEA entity lists provided in CFG_BLS_1B are loaded into their respective nodes The application being used is able to provide a location associated with PSAP-1/PSP-1 		
Test Sequence	Step	Type	Description
	1	Stimulus	<i>Initiate call from the App associated AP-1</i>
	2	Check	<i>That AP fails to send an EDS</i>
	3	Verify	<i>That no data arrives at the PSAP</i>

Interoperability Test Description			
Identifier	TD_BSC_2		
Test Objective	Verify that an AP will not send an EDS to any node that is not a local PSP.		
Configuration	CFG_BLS_1C		
References	TS 103 478		
Applicability	4.2.2, AP-3, AP-5, AP-6		
Pre-test conditions	<ul style="list-style-type: none"> The PEMEA entity lists provided in CFG_BLS_1C are loaded into their respective nodes The application being used is able to provide a location associated with PSAP-1/PSP-1 		
Test Sequence	Step	Type	Description
	1	Stimulus	<i>Initiate call from the App associated AP-1</i>
	2	Check	<i>That AP fails to send an EDS. The AP must be provisioned with a specific neighbor PSP, not just any PSP.</i>
	3	Verify	<i>That no data arrives at the PSAP</i>

Interoperability Test Description			
Identifier	TD_BSC_3		
Test Objective	Verify that an AP will send an EDS to PSP that is in the PEMEA entity list and is configured as a neighbour.		
Configuration	CFG_BLS_1A		
References	TS 103 478		
Applicability	4.2.2, AP-3, AP-5, AP-6		
Pre-test conditions	<ul style="list-style-type: none"> The PEMEA entity lists provided in CFG_BLS_1A are loaded into their respective nodes The application being used is able to provide a location associated with PSAP-1 Ensure that PSP-1 is configured as a neighbor of AP-1 Ensure that AP-1 is configured as a neighbor of PSP-1 Ensure routing data in PSP-1 will direct data to PSAP-1 when the location is in PSAP-1 area. 		
Test Sequence	Step	Type	Description
	1	Stimulus	Initiate call from the App associated AP-1
	2	Check	Inspect logs at AP-1 to see that EDS was sent to PSP-1
	3	Check	Inspect logs at AP-1 to see the EDR contained PSAP-1 as destination from PSP-1
	4	Check	Inspect logs at PSP-1 to see that data was sent to PSAP-1
	5	Verify	Call data is visible on PSAP display

Interoperability Test Description			
Identifier	TD_BSC_4		
Test Objective	Verify that a PSP will not accept an EDS from a node when the node not in the PEMEA entity list.		
Configuration	CFG_PSPC_1A		
References	TS 103 478		
Applicability	PSP-5, PSP-11, PSP-12, 9.2		
Pre-test conditions	<ul style="list-style-type: none"> The PEMEA entity lists provided CFG_PSPC_1A in are loaded into their respective nodes The application being used is able to provide a location associated with PSAP-1/PSP-1 Ensure that PSP-1 is configured as a neighbor of AP-1 Ensure routing data in ASP will direct data to PSP-1 when the location is in PSAP-1 area and PSP-2 when the location is in PSAP-2 area. Ensure routing data in PSP-2 will direct data to PSAP-2 when the location is in PSAP-2 area. Ensure routing data in PSP-2 will direct data to ASP when the location is not in PSAP-2 area. 		
Test Sequence	Step	Type	Description
	1	Stimulus	Initiate call from the App associated AP-1
	2	Check	Inspect AP logs to see that it tried to send an EDS to PSP-1.
	3	Check	Inspect AP logs to assert that the AP received an HTTP error 403 "Forbidden"
	4	Verify	PSAP does not receive data

Interoperability Test Description			
Identifier	TD_BSC_5		
Test Objective	Verify that a PSP will not accept an EDS from a PSP when the node is not in the PEMEA entity list.		
Configuration	CFG_PSPC_1D		
References	TS 103 478		
Applicability	PSP-5, PSP-11, PSP-12		
Pre-test conditions	<ul style="list-style-type: none"> • The PEMEA entity lists provided in CFG_PSPC_1D are loaded into their respective nodes • The application being used is able to provide a location associated with PSAP-1 • Ensure that PSP-2 is configured as a neighbor of AP-2 • Ensure routing data in PSP-2 will direct data to PSAP-2 when the location is in PSAP-2 area. • Ensure routing data in PSP-2 will direct data to PSP-1 when the location is not in PSAP-2 area. 		
Test Sequence	Step	Type	Description
	1	Stimulus	Initiate call from the App associated AP-2
	2	Check	Inspect AP logs to see that it sent an EDS to PSP-2.
	3	Check	Inspect AP logs to see that PSP-2 sent an EDR with a destination of PSP-1
	6	Check	Inspect PSP-2 logs to see that it tried to send an EDS to PSP-1.
	7	Check	Inspect PSP-2 logs to assert that PSP-2 received an HTTP error 403 "Forbidden"
	8	Check	[Optional] If the EDS received by PSP-2 contained an onErrorPost URI then see that the AP receives an error message with a "token" of "httpError", message element "403 Forbidden" and that the complete EDS route is present.
	9	Verify	That the PSAP does not receive the data

Interoperability Test Description			
Identifier	TD_BSC_6		
Test Objective	Verify that a PSP will not accept an EDS from an ASP when the node is not in the PEMEA entity list.		
Configuration	CFG_PSPC_1A		
References	TS 103 478		
Applicability	PSP-5, PSP-11, PSP-12		
Pre-test conditions	<ul style="list-style-type: none"> The PEMEA entity lists provided in CFG_PSPC_1A are loaded into their respective nodes The application being used is able to provide a location associated with PSAP-1/PSP-1 Ensure that PSP-2 is configured as a neighbor of AP-2 Ensure routing data in ASP will direct data to PSP-1 when the location is in PSAP-1 area and PSP-2 when the location is in PSAP-2 area. Ensure routing data in PSP-2 will direct data to PSAP-2 when the location is in PSAP-2 area. Ensure routing data in PSP-2 will direct data to ASP when the location is not in PSAP-2 area. 		
Test Sequence	Step	Type	Description
	1	Stimulus	Initiate call from the App associated AP-2
	2	Check	Inspect AP logs to see that it sent an EDS to PSP-2.
	3	Check	Inspect AP logs to see that PSP-2 sent an EDR with a destination of ASP
	4	Check	Inspect PSP-2 logs to see that it sent an EDS to ASP.
	5	Check	Inspect PSP-2 logs to see that ASP sent an EDR with a destination of PSP-1
	6	Check	Inspect ASP logs to see that it sent an EDS to PSP-1.
	7	Check	Inspect ASP logs to assert that the ASP received an HTTP error 403 "Forbidden"
	8	Check	[Optional] If the EDS received by the ASP contained an onErrorPost URI then see that the AP receives an error message with a "token" of "httpError", message element "403 Forbidden" and that the complete EDS route is present.
	9	Verify	That the PSAP does not receive the data

Interoperability Test Description			
Identifier	TD_BSC_7		
Test Objective	Verify that a PSP will not accept an EDS directly from an AP that is not configured as neighbour.		
Configuration	CFG_PSPC_1B		
References	TS 103 478		
Applicability	4.2.3		
Pre-test conditions	<ul style="list-style-type: none"> The PEMEA entity lists provided in CFG_PSPC_1B are loaded into their respective nodes The application being used is able to provide a location associated with PSAP-1 Ensure that AP-1 is NOT configured as a neighbor of PSP-1 Ensure routing data in ASP will direct data to PSP-1 when the location is in PSAP-1 area and PSP-2 when the location is in PSAP-2 area. Ensure routing data in PSP-2 will direct data to PSAP-2 when the location is in PSAP-2 area. Ensure routing data in PSP-2 will direct data to ASP when the location is not in PSAP-2 area.

Functionality for TD_BSC_8 is covered under TD_BSC_3

Interoperability Test Description			
Identifier	TD_BSC_9		
Test Objective	Verify that a PSP will not send an EDS to a PSAP that is not its neighbour		
Configuration	CFG_BLS_1D*		
References	TS 103 478		
Applicability	4.2.3		
Pre-test conditions	<ul style="list-style-type: none"> • The PEMEA entity lists provided in CFG_BLS_1D* are loaded into their respective nodes • The application being used is able to provide a location associated with PSAP-1 • Ensure that AP-1 is configured as a neighbor of PSP-1 • Ensure routing data in PSP-1 is directed to PSAP-1 when the location is in PSAP-1 area. • Ensure that PSAP-1 does not have PSP-1 configured as a neighbor. 		
Test Sequence	Step	Type	Description
	1	Stimulus	Initiate call from the App associated AP-1
	2	Check	Inspect AP logs to see that it sent an EDS to PSP-1.
	3	Check	Inspect AP logs to see that PSP-1 sent an EDR with a destination of PSAP-1
	4	Check	Inspect PSP-1 logs to see that it tried to send an EDS to PSAP-1.
	5	Check	Inspect PSP-1 logs to assert that PSP-1 received an HTTP error 403 "Forbidden" from the PSAP.
	6	Check	[Optional] If the EDS received by PSP-1 contained an onErrorPost URI then see that the AP receives an error message with a "token" of "httpError", message element "403 Forbidden" and that the complete EDS route is present.
	7	Verify	That the PSAP does not receive the data

Interoperability Test Description			
Identifier	TD_BSC_10		
Test Objective	Verify that a PSP will accept an EDS from an ASP that authenticates		
Configuration	CFG_PSPC_1B		
References	TS 103 478		
Applicability	PSP-12, 14.2.3		
Pre-test conditions	<ul style="list-style-type: none"> The PEMEA entity lists provided in CFG_PSPC_1B are loaded into their respective nodes The application being used is able to provide a location associated with PSAP-1 Ensure that AP-2 is configured as a neighbor of PSP-2 Ensure that PSP-2 is configured as a neighbor of AP-2 Ensure routing data in ASP will direct data to PSP-1 when the location is in PSAP-1 area and PSP-2 when the location is in PSAP-2 area. Ensure routing data in PSP-2 will direct data to PSAP-2 when the location is in PSAP-2 area. Ensure routing data in PSP-2 will direct data to ASP when the location is not in PSAP-2 area. 		
Test Sequence	Step	Type	Description
	1	Stimulus	Initiate call from the App associated AP-2
	2	Check	Inspect AP logs to see that it sent an EDS to PSP-2.
	3	Check	Inspect AP logs to see that PSP-2 sent an EDR with a destination of ASP
	4	Check	Inspect PSP-2 logs to see that it sent an EDS to ASP.
	5	Check	Inspect PSP-2 logs to see that ASP sent an EDR with a destination of PSP-1
	6	Check	Inspect ASP logs to see that it sent an EDS to PSP-1.
	7	Check	Inspect ASP logs to see that PSP-1 sent an EDR with a destination of PSAP-1
	8	Check	[Optional] Inspect PSP-1 logs to see that it sent an EDS to PSAP-1.
	9	Check *	[Optional] Inspect PSP-1 logs to see that PSAP-1 sent an EDR with a destination of PSAP-1
	10	Verify	That data can be viewed at the PSAP

	6	Check	[Conditional] Inspect logs at PSAP-1 to see that it got an EDS from PSP-1
	7	Check	Inspect logs at PSP-1/PSAP-1 to see that it sent its support capabilities to AP-1 by posting to the URI contained in the onCapSupportPost parameter of the received EDS.
	8	Check	Inspect logs at AP-1 to see that it received the supported PSAP-1 capabilities.
	9	Verify	Call data is visible on PSAP display

Interoperability Test Description			
Identifier	TD_RTE_10		
Test Objective	Verify that the AP will not accept an onCapSupportPost connection from a node not in the PEMEA entity list		
Configuration	CFG_CAP_1A		
References	TS 103 478		
Applicability	9.2, 14.1.2		
Pre-test conditions	<ul style="list-style-type: none"> The PEMEA entity lists provided in CFG_CAP_1A are loaded into their respective nodes The application being used is able to provide a location associated with PSAP-2 AP will include onCapSupportPost URI in the EDS Ensure that PSP-1 is configured as a neighbor of AP-1 Ensure that AP-1 is configured as a neighbor of PSP-1 Ensure routing data in PSP-1 will direct data to ASP-1 when the location is in PSAP-2 area. Ensure routing data in ASP-1 will direct data to PSP-2 when the location is in PSAP-2 area. Ensure routing data in PSP-2 will direct data to PSAP-2 when the location is in PSAP-2 area. 		
Test Sequence	Step	Type	Description
	1	Stimulus	Initiate call from the App associated AP-1
	2	Check	Inspect logs at AP-1 to see that EDS was sent to PSP-1
	3	Check	Inspect logs at AP-1 to see the EDR contained ASP-1 as destination from PSP-1
	4	Check	Inspect logs at PSP-1 to see that an EDS was sent to ASP-1
	5	Check	Inspect logs at PSP-1 to see the EDR contained PSP-2 as destination from ASP-1
	6	Check	Inspect logs at ASP-1 to see that an EDS was sent to PSP-2
	7	Check	Inspect logs at ASP-1 to see the EDR contained PSAP-2 as destination from PSP-2
	8	Check	[Conditional] Inspect logs at PSP-2 to see that it sent an EDS from PSAP-2
	9	Check	[Conditional] Inspect logs at PSP-2 to see that it got an EDR from PSAP-2
	10	Check	[Conditional] Inspect logs at PSAP-2 to see that it got an EDS from PSP-2
	11	Check	Inspect logs at PSP-2/PSAP-2 to see that it sent its support capabilities to AP-1 by posting to the URI contained in the onCapSupportPost parameter of the received EDS. Also check that it received and error "403 Forbidden" from AP-1.
	12	Check	Inspect logs at AP-1 to see that PSP-2/PSAP-2 attempted to post an onCapSupportPost message but that it was rejected with a "403 Forbidden"
	13	Verify	Call data SHOULD be visible on PSAP display, but no extended capabilities should be available

Test Sequence	Step	Type	Description
	1	Stimulus	Initiate call from the App associated AP-1
	2	Check	Inspect logs at AP-1 to see that EDS was sent to PSP-1
	3	Check	Inspect logs at AP-1 to see the EDR contained ASP-1 as destination from PSP-1
	4	Check	Inspect logs at PSP-1 to see that an EDS was sent to ASP-1
	5	Check	Inspect logs at PSP-1 to see the EDR contained PSP-2 as destination from ASP-1
	6	Check	Inspect logs at ASP-1 to see that an EDS was sent to PSP-2
	7	Check	Inspect logs at ASP-1 to see the EDR contained PSAP-2 as destination from PSP-2
	8	Check	[Conditional] Inspect logs at PSP-2 to see that it sent an EDS from PSAP-2
	9	Check	[Conditional] Inspect logs at PSP-2 to see that it got an EDR from PSAP-2
	10	Check	[Conditional] Inspect logs at PSAP-2 to see that it got an EDS from PSP-2
	11	Check	Inspect logs at PSP-2/PSAP-2 to obtain the URI from the UserInfo element of the PIDF-LO.
	12	Stimulus	Using wget, curl or a browser attempt to retrieve the User information using the URI obtained in step 11.
	13	Check	Inspect logs at AP-1 to see that it received a request for Userinfo from an unknown entity but it rejected it with a "403 Forbidden".
	14	Verify	Observe that the response received in step 12 is a "403 Forbidden".

Interoperability Test Description			
Identifier	TD_DRE_7		
Test Objective	Verify that the AP will only provide SubscriberInfo or UserInfo to the same entity that sent the onCapSupportPost.		
Configuration	CFG_BLS_1A		
References	TS 103 478		
Applicability	<i>This is not described and explicit requirement in the TS, however it should be for security reasons and should explicitly added to clause 11.1.4</i>		
Pre-test conditions	<ul style="list-style-type: none"> The PEMEA entity lists provided in CFG_BLS_1A are loaded into their respective nodes The application being used is able to provide a location associated with PSAP-1 AP shall include a URI for onCapSupportPost in the EDS AP shall include a URI for SubscriberInfo/UserInfo in the PIDF-LO of the EDS Ensure that PSP-1 is configured as a neighbor of AP-1 Ensure that AP-1 is configured as a neighbor of PSP-1 PSP-1 is able to pass data to PSAP-1 A Client-side certificate exists for use with curl or wget The domain associated with certificate is also loaded into AP-1 and identified as a PSP or PSAP and is different to PSAP-1. 		
Test Sequence	Step	Type	Description
	1	Stimulus	Initiate call from the App associated AP-1
	2	Check	Inspect logs at AP-1 to see that EDS was sent to PSP-1
	3	Check	Inspect logs at AP-1 to see the EDR contained PSAP-1 as destination from PSP-1
	4	Check	[Conditional] Inspect logs at PSP-1 to see that an EDS was sent to PSAP-1
	5	Check	[Conditional] Inspect logs at PSP-1 to see an EDR was received from PSAP-1
	6	Check	[Conditional] Inspect logs at PSAP-1 to see that it got an EDS from PSP-1
	7	Check	Inspect logs at PSP-1/PSAP-1 sent an onCapSupportPost to AP-1 and that it got a valid response (not an HTTP error).
	8	Check	Inspect logs at PSP-1/PSAP-1 to obtain the URI from the SubscriberInfo/UserInfo element of the PIDF-LO.
	9	Stimulus	Using wget, curl attempt to retrieve the Subscriber/User information using the URI obtained in step 8. Ensure that you are using the correct syntax so that client-side certificate is used with the get. For Example: curl --insecure --cert-type pem --cert /home/dummyuser/client-cert-stacked.pem --interface eth0:1 "https://ap.vendor.plugtest/dh39sijhnjns"
	10	Check	Inspect logs at AP-1 to see that it received a request for UserInfo from the wget/curl PSP/PSAP entity but it rejected it with a "403 Forbidden".
	11	Verify	Observe that the response received in step 9 is a "403 Forbidden".

Interoperability Test Description			
Identifier	TD_DRE_8		
Test Objective	Verify that the EDS contains the identity information for the AP (ProviderInfo)		
Configuration	CFG_BLS_1A		
References	TS 103 478		
Applicability	12.5.5, 13.2, 13.3, 13.4		
Pre-test conditions	<ul style="list-style-type: none"> • The PEMEA entity lists provided in CFG_BLS_1A are loaded into their respective nodes • The application being used is able to provide a location associated with PSAP-1 • Ensure that PSP-1 is configured as a neighbor of AP-1 • Ensure that AP-1 is configured as a neighbor of PSP-1 • PSP-1 is able to pass data to PSAP-1 		
Test Sequence	Step	Type	Description
	1	Stimulus	Initiate call from the App associated AP-1
	2	Check	Inspect logs at AP-1 to see that EDS was sent to PSP-1
	3	Check	Inspect logs at AP-1 to see the EDR contained PSAP-1 as destination from PSP-1
	4	Check	[Conditional] Inspect logs at PSP-1 to see that an EDS was sent to PSAP-1
	5	Check	[Conditional] Inspect logs at PSP-1 to see an EDR was received from PSAP-1
	6	Check	[Conditional] Inspect logs at PSAP-1 to see that it got an EDS from PSP-1
	7	Check	Inspect the logs on PSP-1/PSAP-1 to see that the AP ProviderInfo was sent in the EDS.
	8	Verify	The AP ProviderInfo is available in the PSAP display

7.4 LOC Test Descriptions

Interoperability Test Description			
Identifier	TD_LOC_1		
Test Objective	Verify that a terminating PSP/PSAP includes the location update capability in the onCapSupportPost if the capability is proffered in the EDS and it supports location updates.		
Configuration	CFG_BLS_1A		
References	TS 103 478		
Applicability	10.3.11, 10.3.12, 11.1.1, 11.1.4		
Pre-test conditions	<ul style="list-style-type: none"> The PEMEA entity lists provided in CFG_BLS_1A are loaded into their respective nodes The application being used is able to provide a location associated with PSAP-1 The application shall support providing location updates AP shall include a URI for onCapSupportPost in the EDS AP shall include a location update capability in the EDS Ensure that PSP-1 is configured as a neighbor of AP-1 Ensure that AP-1 is configured as a neighbor of PSP-1 PSP-1 is able to pass data to PSAP-1 PSP-1/PSAP-1 shall be capable of requesting location updates. 		
Test Sequence	Step	Type	Description
	1	Stimulus	Initiate call from the App associated AP-1
	2	Check	EDS arrives at PSP-1/PSAP-1 and the EDS contains an apMoreInformation information element indicating that it can provide location updates.
	3	Check	PSP-1/PSAP-1 sends an onCapSupportPost to AP-1 indicating that it can support location updates
	4	Check	Inspect AP-1 logs to see that it received the onCapSupportPost from PSP-1/PSAP-1 and that it included support for location updates.
	5	Stimulus	Change the location in the application
	6	Stimulus	Initiate a location Update request from the PSAP
	7	Check	Inspect PSP-1/PSAP-1 logs to see that it made a request to AP-1 for a location update
	8	Check	Inspect AP-1 logs to see that it received a location update request from PSP-1/PSAP-1 and that it returned an updated location.
	9	Check	Inspect PSP-1/PSAP-1 logs to see that it received an updated location from AP-1.
	10	Verify	Updated location is displayed at the PSAP

Interoperability Test Description			
Identifier	TD_LOC_2		
Test Objective	Verify that the terminating PSP/PSAP will not request a location update if the provided URI does not map to a valid AP node in the PEMEA entity list.		
Configuration	<TBD>		
References	TS 103 478		
Applicability	<i>A new procedure set is required for this under Clause 14.2 PSP Procedures</i>

References	TS 103 478		
Applicability	9.2, 14.1.2		
Pre-test conditions	<ul style="list-style-type: none"> The PEMEA entity lists provided in CFG_BLS_1A are loaded into their respective nodes The application being used is able to provide a location associated with PSAP-1 The application shall support providing location updates AP shall include a URI for onCapSupportPost in the EDS AP shall include a location update capability in the EDS Ensure that PSP-1 is configured as a neighbor of AP-1 Ensure that AP-1 is configured as a neighbor of PSP-1 PSP-1 is able to pass data to PSAP-1 A Client-side certificate exists for use with curl or wget The domain associated with certificate is also loaded into AP-1 and identified as an ASP. 		
Test Sequence	Step	Type	Description
	1	Stimulus	Initiate call from the App associated AP-1
	2	Check	EDS arrives at PSP-1/PSAP-1 and the EDS contains an apMoreInformation information element indicating that it can provide location updates.
	3	Check	PSP-1/PSAP-1 sends an onCapSupportPost to AP-1 indicating that it can support location updates
	4	Check	Inspect AP-1 logs to see that it received the onCapSupportPost from PSP-1/PSAP-1 and that it included support for location updates.
	5	Check	Inspect logs at PSP-1/PSAP-1 to obtain the URI from the location update information element in the EDS.
	6	Stimulus	Change the location in the application
	7	Stimulus	Using wget, curl attempt to retrieve the updated location information using the URI obtained in step 8. Ensure that you are using the correct syntax so that client-side certificate is used with the get. For Example: curl --insecure --cert-type pem --cert /home/dummyuser/client-cert-stacked.pem --interface eth0:1 "https://ap.vendor.plugin/dh39sijihnjns"
	8	Check	Inspect logs at AP-1 to see that it received a request for a location update from the wget/curl ASP entity but it rejected it with a "403 Forbidden".
	9	Verify	Observe that the response received in step 7 is a "403 Forbidden".

Interoperability Test Description			
Identifier	TD_LOC_5		
Test Objective	Verify that the AP will only provide location updates to the same entity that sent the onCapSupportPost.		
Configuration	CFG_BLS_1A		
References	TS-103-478		
Applicability	<i>This is not described and explicit requirement in the TS, however it should be for security reasons and should explicitly added to clause 11.1.4</i>		
Pre-test conditions	<ul style="list-style-type: none"> • The PEMEA entity lists provided in CFG_BLS_1A are loaded into their respective nodes • The application being used is able to provide a location associated with PSAP-1 • The application shall support providing location updates • AP shall include a URI for onCapSupportPost in the EDS • AP shall include a location update capability in the EDS • Ensure that PSP-1 is configured as a neighbor of AP-1 • Ensure that AP-1 is configured as a neighbor of PSP-1 • PSP-1 is able to pass data to PSAP-1 • A Client-side certificate exists for use with curl or wget • The domain associated with certificate is also loaded into AP-1 and identified as a PSP or PSAP. 		
Test Sequence	Step	Type	Description
	1	Stimulus	Initiate call from the App associated AP-1
	2	Check	EDS arrives at PSP-1/PSAP-1 and the EDS contains an apMoreInformation information element indicating that it can provide location updates.
	3	Check	PSP-1/PSAP-1 sends an onCapSupportPost to AP-1 indicating that it can support location updates
	4	Check	Inspect AP-1 logs to see that it received the onCapSupportPost from PSP-1/PSAP-1 and that it included support for location updates.
	5	Check	Inspect logs at PSP-1/PSAP-1 to obtain the URI from the location update information element in the EDS.
	6	Stimulus	Change the location in the application
	7	Stimulus	Using wget, curl attempt to retrieve the updated location information using the URI obtained in step 8. Ensure that you are using the correct syntax so that client-side certificate is used with the get. For Example: curl --insecure --cert-type pem --cert /home/dummyuser/client-cert-stacked.pem --interface eth0:1 "https://ap.vendor.plugtest/dh39sijihnjns"
	8	Check	Inspect logs at AP-1 to see that it received a request for a location update from the wget/curl ASP entity but it rejected it with a "403 Forbidden".
	9	Verify	Observe that the response received in step 7 is a "403 Forbidden".

Functionality for TD_LOC_5 is covered by TD_LOC_4

Interoperability Test Description			
Identifier	TD_LOC_6		
Test Objective	Verify that the AP will return an HTTP 404 Not found when its application has closed the data connection and the terminating PSP or PSAP makes a request for a location update.		
Configuration	CFG_BLS_1A		
References	TS 103 478		
Applicability	14.1.3		
Pre-test conditions	<ul style="list-style-type: none"> • The PEMEA entity lists provided in CFG_BLS_1A are loaded into their respective nodes • The application being used is able to provide a location associated with PSAP-1 • The application shall support providing location updates • AP shall include a URI for onCapSupportPost in the EDS • AP shall include a location update capability in the EDS • Ensure that PSP-1 is configured as a neighbor of AP-1 • Ensure that AP-1 is configured as a neighbor of PSP-1 • PSP-1 is able to pass data to PSAP-1 		
Test Sequence	Step	Type	Description
	1	Stimulus	Initiate call from the App associated AP-1
	2	Check	EDS arrives at PSP-1/PSAP-1 and the EDS contains an apMoreInformation information element indicating that it can provide location updates.
	3	Check	PSP-1/PSAP-1 sends an onCapSupportPost to AP-1 indicating that it can support location updates
	4	Check	Inspect AP-1 logs to see that it received the onCapSupportPost from PSP-1/PSAP-1 and that it included support for location updates.
	5	Check	Inspect logs at PSP-1/PSAP-1 to obtain the URI from the location update information element in the EDS.
	6	Stimulus	Change the location in the application
	7	Stimulus	Request a location update using the PSAP UI
	8	Stimulus	Close the data-session/call on the application
	9	Check	[Conditional] Inspect AP-1 logs to see that the AP knows that the call has been terminated.
	10	Stimulus	Request a location update using the PSAP UI
	11	Check	Inspect AP-1 logs to see that PSP-1/PSAP-1 requested a location update but that the call/session was terminated and that AP-1 return a "404 Not Found" HTTP error.
	12	Check	Inspect logs at PSP-1/PSAP-1 to see that it requested a location update from AP-1 but that it got a "404 Not Found" error indicating that the session had terminated.
	13	Verify	The PSAP cleans up it session data and no further data is provided to the PSAP UI.

7.5 SIP Test Descriptions

Interoperability Test Description			
Identifier	TD_SIP_1		
Test Objective	Verify that if the terminating PSP or PSAP that supports the SIP_Request capability and the capability is proffered in the EDS by the AP that it is included in the onCapSupportPost response.		
Configuration	CFG_SIP_1		
References	TS 103 478		
Applicability	10.3.11, 10.3.12, 11.1.1, 11.1.4		
Pre-test conditions	<ul style="list-style-type: none"> The PEMEA entity lists provided in CFG_SIP_1 are loaded into their respective nodes The application being used is able to provide a location associated with PSP-2 The application shall support requesting a SIP URI The application should support location updates AP shall include a SubscriberInfo URI in the PIDF-LO of the EDS AP shall include a URI for onCapSupportPost in the EDS AP shall include a SIP_Request capability in the EDS Ensure that PSP-1 is configured as a neighbor of AP-1 Ensure that AP-1 is configured as a neighbor of PSP-1 PSP-1 shall all EDS messages not for a local PSAP to the ASP. The ASP shall direct all EDS messages to PSP-2 SIP-PEMEA interworking function is configured with the BCF address. 		
Test Sequence	Step	Type	Description
	1	Stimulus	Initiate call from the App associated AP-1
	2	Check	EDS arrives at PSP-2 and the EDS contains an apMoreInformation information element indicating that a SIP URI is required.
	3	Check	Note the value of the SubscriberInfo URI in the PIDF-LO provided in the EDS.
	4	Check	PSP-2 sends an onCapSupportPost to AP-1 indicating that it can support location updates
	5	Check	Inspect AP-1 logs to see that it received the onCapSupportPost from PSP-2 and that it included support for providing SIP URIs.
	6	Check	Inspect logs at PSP-2 to see that it has invoked the SIP_Request capability at AP-1 and provided the SIP URI for the SPIF. Note the time of the sending against the time the EDS was received.
	7	Check	Inspect the logs at AP-1 to see that it received a SIP URI from PSP-2
	8	Check	Inspect the SPIF logs to see that the SIP INVITE arrived at the SPIF. If the INVITE contained a Geolocation header field and/or a Call-Info header field, not the values.
	9	Check	Inspect SPIF logs to see the values of the Geolocation and Call-Info header fields in the outbound SIP INVITE point to PSP-2 and that they are not the same as those that arrived (if any did). Also note that the route header field now contains the address of the BCF.
	10	Check	Inspect the BCF logs to see that it received the INVITE from the SPIF
	11	Check	Inspect the PSAP logs to see that the INVITE arrived at the correct PSAP.
	12	Verify	PSAP can request SubscriberInfo from PSP-2
	13	Verify	PSAP can request location from PSP-2
	14	Stimulus	[Optional] Change the location in the Application
	15	Stimulus	[Optional] Initiate a location request from the PSAP.
	16	Check	[Optional] Inspect PSP-2 logs to see request for location from PSAP. Inspect PSP-2 logs to see if requests location from AP-1 using the URI provided in the original EDS location update information element.
	17	Check	[Optional] Inspect AP-1 logs to see that PSP-2 requested a location update and the latest location is returned to PSP-2

Interoperability Test Description			
	18	Check	[Optional] Inspect PSP-2 logs to see that AP-1 provide the location from step 14, and that this location was returned to the PSAP.
	19	Verify	[Optional] PSAP can display the updated location.

Interoperability Test Description			
Identifier	TD_SIP_2		
Test Objective	Verify that the terminating PSP/PSAP will only invoke the SIP_Request capability if the URI corresponds to an AP in the PEMEA entity list.		
Configuration	CFG_SIP_1		
References	TS 103 478		
Applicability	A new procedure set is required for this under Clause 14.2 PSP Procedures

7.6 AV Test Descriptions

Interoperability Test Description			
Identifier	TD_AV_1		
Test Objective	Verify that if the terminating PSP or PSAP that supports the Audio_Video capability and the capability is proffered in the EDS by the AP that it is included in the onCapSupportPost response.		
Configuration	CFG_AV_1		
References			
Applicability	10.3.11, 10.3.12, 11.1.1, 11.1.4		
Pre-test conditions	<ul style="list-style-type: none"> • The PEMEA entity lists provided in CFG_AV_1 are loaded into their respective nodes • The application being used is able to provide a location associated with PSP-2 • The application shall support the Audio_Video PEMEA capability • The application should support location updates • AP shall include a SubscriberInfo URI in the PIDF-LO of the EDS • AP shall include a URI for onCapSupportPost in the EDS • AP shall include a Audio_Video capability in the EDS • Ensure that PSP-1 is configured as a neighbor of AP-1 • Ensure that AP-1 is configured as a neighbor of PSP-1 • PSP-1 shall all EDS messages not for a local PSAP to the ASP-1. • The ASP-1 shall direct all EDS messages to PSP-2 • PSAP-2 support the Audio_Video PEMEA capability • 		
Test Sequence	Step	Type	Description
	1	Stimulus	Initiate call from the App associated AP-1
	2	Check	EDS arrives at PSP-2/PSAP-2 and the EDS contains an apMoreInformation information element indicating that Audio_Video is supported.
	3	Check	PSP-2/PSAP-2 sends an onCapSupportPost to AP-1 indicating that it can support Audio_Video
	4	Check	Inspect AP-1 logs to see that it received the onCapSupportPost from PSP-2/PSAP-2 and that it included support for Audio_Video

Interoperability Test Description			
Identifier	TD_AV_2		
Test Objective	Verify that the terminating PSP/PSAP will invoke the Audio_Video capability in the AP as soon as it has sent the onCapSupportPost message.		
Configuration	CFG_AV_1		
References	TS 103 478		
Applicability	<i>Under specified, requires updates to the TS, and a formal extensions document</i>		
Pre-test conditions	<ul style="list-style-type: none"> TD_AV_1 has been executed successfully. 		
Test Sequence	Step	Type	Description
	1	Check	Inspect logs at PSP-2/PSAP-2 to see that it has invoked the Audio_Video capability at AP-1 and provided a URI to which the Application should connect.
	2	Check	Inspect the logs at AP-1 to see that it received an Audio_Video URI from PSP-2/PSAP-2
	3	Verify	Confirm the establishment of an audio and video connection between the application and the PSAP.
	4	Verify	Confirm that communications between the application and PSAP work as expected
	5	Stimulus	Terminate the Audio_Video session from the Application.
	6	Verify	Confirm that the Audio_Video communications between the application and the PSAP concluded.

Interoperability Test Description			
Identifier	TD_AV_3
