

Terms of Reference for TC DATA Working Group vertical Products, Applications, and Services (WG vPAS)

Approved at DATA#3, Date: 23 October 2025

Scope

The TC DATA aims at supporting the deployment and operation of distributed solutions for data collection, integration, sharing and management by including also cybersecurity and testing aspects. This WG targets the standardization of (i) data **P**roducts, (ii) data **A**pplications, and (iii) data **S**ervices in vertical domains.

Areas of Activity

- Maintaining and evolving specifications related to products, services and applications published by other ETSI TGs.
- Developing data-related standard specifications for supporting vertical applications in different vertical domains (e.g., Maritime and eNavigation, IoT & M2M communications, Integrated Sensing, Augmented Reality, Cybersecurity, etc.).
- Investigating gaps between existing data products, applications and services and the ongoing standardization efforts in vertical domains.
