

Terms of Reference for the Evolution and Ecosystem Working Group (NFV EVE WG)

Responsibilities

The main responsibilities of this working group are:

- Addresses the NFV evolution based on new use cases, emerging technologies, and related ecosystem aspects, and studies the high-level requirements imposed on the evolving NFV.
- Researching the telco cloud deployment of NFV specifications or alternative approaches, analysing unmet needs and interoperability issues, and find NFV evolution solutions.
- Maintain NFV-related work and roadmap with other organizations (such as SDOs, industry groups, open source communities, etc.), and report to the ISG NFV on their potential involvement in the NFV ecosystem.

Areas of activity / scope

The areas of activity include:

- Analysing new features of NFV, taking into account new use cases, new technologies, and related ecosystem aspects.
- Analysing high-level requirements for new features of NFV.
- Documenting possible solutions for addressing unmet needs and interoperability issues in telco cloud deployment.
- Facilitating necessary collaboration with external organization.
